WORK EXPERIENCE

Web Development Intern
Armada / 2023 (3 months)

I've worked at Armada as a MERN stack website developer, navigating complex code obstacles to create engaging online experiences. Working together with the vibrant Armada team, I've refined my knowledge of MongoDB, Express.js, React.js, and Node.js, along with Shopify and Wordpress web development and combining front-end and back-end features with ease. I've designed user-centered solutions that are consistent with Armada's innovation and quality from conception to implementation. Whether it's enhancing functionality or adding state-of-the-art features, I thrive on projects that combine precision and creativity.
